

## Description

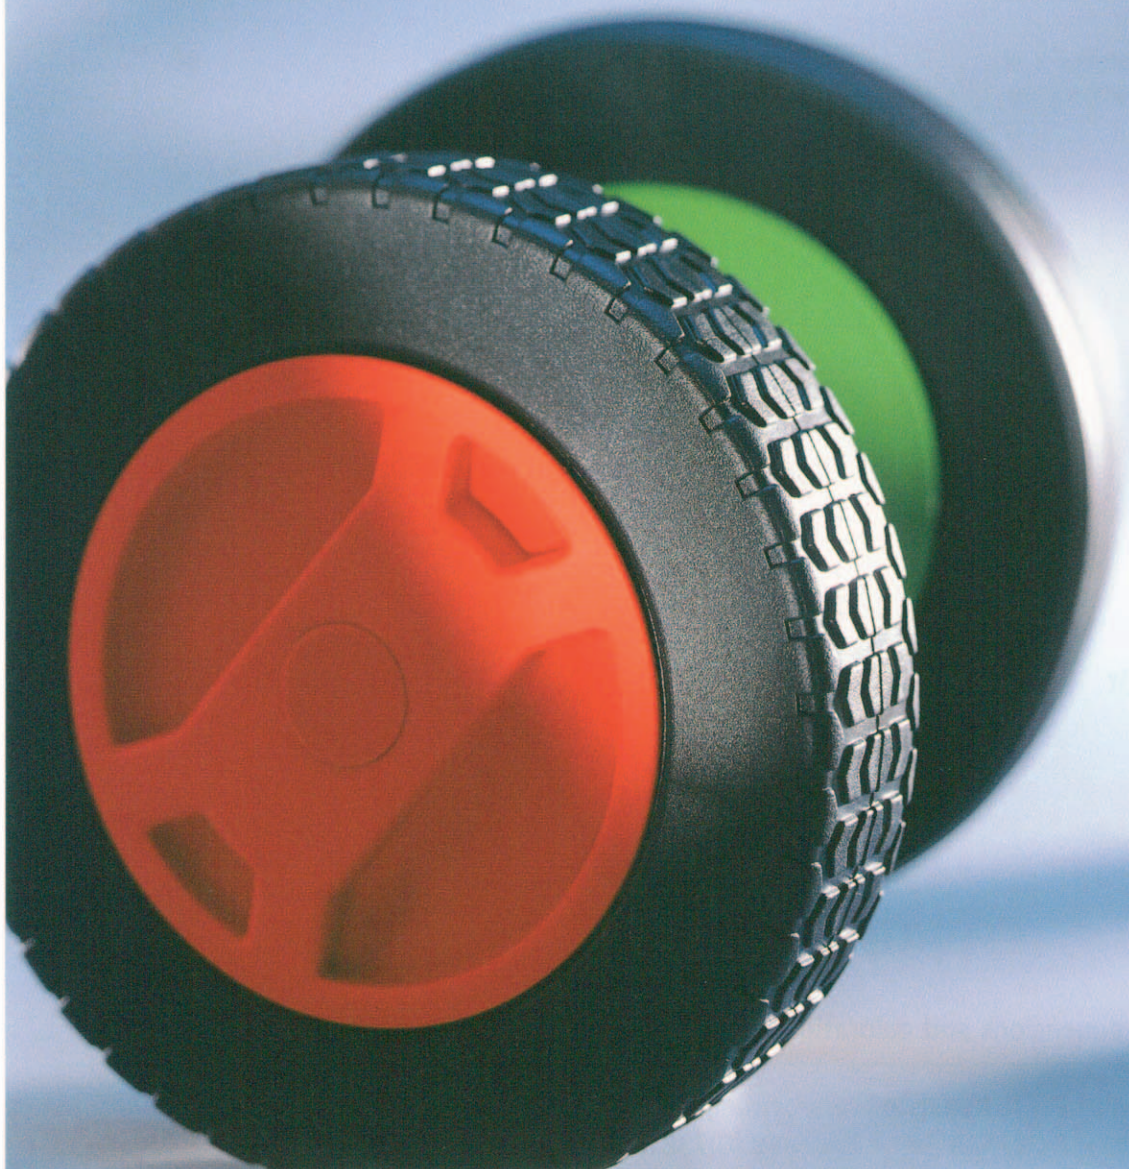

The wheels in the RAM-97 range are a further development of the RAM-88 range. The wheels have a narrower tread, a smaller wall thickness in ripping and a smaller depth of profile, making them suitable with use in very light devices with an average service life. A wheel cover prevents dirt from getting into the area of the hub. Bearing capacity is between 20 kg and 30 kg with available diameters ranging from 130 to 180 mm.

## Types of bearings

plain bearings, PA-bushing, ball bearings, plastic ball bearings, roller bearings, and special bearings on request

## Applications

lawnmowers, high-pressure cleaners, hose reels
